

Q 1.

1. collected
2. bitterness
3. dried
4. cleaned
5. Shell
6. nibs
7. mass
8. sugar
9. emulsifiers
10. commercial

Q 2.

From the given data, we can interpret that from 2011 to 2016 population of bears, dolphins and whales in North America had been greatly affected by the federal spending on species protection. Within these years bears had got the largest share of species protection expenses, exact 65 percent, among the three species, and thus had a steady rise in population. While dolphins with lowest share of 5 percent of the expenses had an exponential decline in their population, whereas whales with the rest of the expenses had staggering rise and decline in population.
